## Carclo break the mould in the tech sector by adopting the Ecometrica Platform for sustainability reporting

Carclo plc is a constituent of the FTSE SmallCap Index and reported revenues of £97.3m in 2014.

Its revenues are derived from the supply of fine tolerance, injection moulded plastics components, mainly for medical products and the design and supply of specialised injection moulded LED-based lighting systems to the lowvolume premium automotive industry.

As well as having ambitious corporate responsibility goals, Carclo wanted to enhance its sustainability credentials for tenders, and improve reporting capabilities in time to comply with UK mandatory carbon reporting regulations, which affect FTSE SmallCap organisations.

The Ecometrica Platform's Sustainability suite was selected for its ease of use, flexible analytics and robust reporting.

"We knew exactly what we were getting with Ecometrica, and we haven't been disappointed. With UK mandatory reporting on the horizon, we needed a solution that was easy to use straight out of the box, so we could comply with the regulatory requirements as quickly as possible. Thanks to the Sustainability modules and the support we received from the team at Ecometrica, we've done that."
